The M31 achieves a highly natural color response for skin tones and other memory colors by the subtlety of it's adjustments through a high-resolution color-remapping matrix.. Saturation is handled non-linearly which prevents individual colors from oversaturating while increasing vibrancy for darker colors.

You'll need one of the following color grading/editing applications to work with the M31 3D LUT: DaVinci Resolve (Full & Lite) Adobe Speedgrade Adobe Premiere CC.. Unlike most presets that attempt to create the so-called "Teal and Orange" look the M31 only works with the colors you recorded on set and enhances them based on their intensity.. The key to image stylization while retaining fidelity and a natural response is to protect certain memory colors from being altered..
